**VIRASol™**

## Product Information

**Virasol™ “Immune Boost Extract”** contains **Phytotherapeutic** Extracts of *Sambucus nigra*, *Tabebuia impetiginosa*, *Isatis indigotica*, and *Pterocarpus soyauxii*. **Virasol** contains four botanicals with deep roots in traditional herbal practice and active investigation for their effects on the body's natural immune response.

**Sambucus nigra (Elderberry)** Native to Europe and western Asia, elderberry has been a fixture in traditional herbalism for centuries, with folk practitioners historically preparing its berries and flowers to support comfort during seasonal illness and overall wellness. Modern botanical researchers have investigated constituents of *Sambucus nigra* for their interactions with immune signaling pathways, and peer-reviewed studies have explored how elderberry extracts may influence the body's natural defense processes at the cellular level.

**Tabebuia impetiginosa (Pau d'Arco)** *Tabebuia impetiginosa*, commonly known as Pau d'Arco, is native to the tropical rainforests of Central and South America, where indigenous traditions have historically incorporated the inner bark into preparations intended to support resilience and vitality. Researchers have investigated bioactive compounds found in Pau d'Arco bark for their effects on microbial environments and immune-related cellular activity, and botanical literature continues to explore its mechanisms of action in the context of the body's natural defenses.

**Isatis indigotica (Woad / Ban Lan Gen)** *Isatis indigotica*, known in Traditional Chinese Medicine as Ban Lan Gen, has been used in East Asian herbal practice for centuries, with classical texts referencing the root as a preparation traditionally associated with seasonal wellness and the body's response to environmental challenges. Contemporary researchers have studied compounds isolated from *Isatis indigotica* for their effects on immune signaling pathways and inflammatory processes, and this herb remains an active subject of investigation in integrative botanical research.

**Pterocarpus soyauxii (African Padauk / Camwood)** *Pterocarpus soyauxii*, commonly known as African Padauk or Camwood, originates in the tropical forests of Central and West Africa, where it has been incorporated into traditional botanical practices for its broadly supportive properties. While its presence in Western supplement research is more recent, scientists have begun examining constituents of *Pterocarpus soyauxii* for their potential effects on oxidative and immune-related cellular pathways, contributing to a growing body of modern botanical literature on this plant.

**Highly bio-available due to heat and hydro-alcohol reflux extraction**

**Organic, Non-GMO, Gluten free**

Extracted with **Mauigrown organic sugarcane alcohol** and deep ocean mineral water
